

rolling motion of the rear view module (51) both vertically and horizontally to the distal end of the endoscope (14). It may also be attached by any other suitable mechanical articulation. In resting position, the rear view module (51) covers the main image lens (20) and the main illumination bulb (21) of the endoscope. In this position, the additional image lens (303) and the additional illumination bulb (304) faces forward and gives a forward view and illuminates the area in front of the endoscope. --
